

RELEVANT CLIENT INFORMATION DURING VISITS TO THE CLIENTS HOME

At work in the client's home

BENEFITS

Always updated

Information and documentation

Changing plans

Visit lists transferred electronically from VITAE Care Planning

No additional registration

Extra security

Get to know VITAE Care PDA at your own pace

VITAE Care PDA provides care workers with access to relevant client information before or during visits to the client's home.

Care workers can get a fast overview of, for example, important health information, accessibility of the home, current medication, latest notes, and a total list of the services the client receives.

In addition, the system allows for fast and easy registration of actual contact time (at visit or service level) thus producing accurate data and a basis for comparison of scheduled contact time with actual contact time.

ALWAYS UPDATED

VITAE Care PDA will always provide updated information about the client thanks to its on-line access to VITAE Care Record and VITAE Care Planning.

The care worker can see current medication registrations, notes, focus areas, next of kin, own doctor, pharmacy etc. The care worker is able to send notifications, register medication or document in notes and focus areas directly in VITAE Care PDA, all of which will be available to others in VITAE Care Record and VITAE Care PDA.

INFORMATION AND DOCUMENTATION

VITAE Care PDA provides home care workers with a daily source of information as well as the possibility to document observations and register actual contact time and services. The care worker is able to see the services that have been allocated to the client and inform the client about, for example, future planned visits and services while still at the client's home.

CHANGING PLANS

Everyday work is not always going according to plan. You may have to register extra visits, a client wishes to change one or more services, or you have to cancel scheduled visits or services.

Carers may be prevented from making a planned visit and colleagues have to take over. Thanks to the automatic display of all the team's visit lists in VITAE Care PDA, the individual care workers are able to take on visits from other colleagues' visit lists with the same access privileges to client information as on own visit list. Thus care workers are able to create a fast and easy overview and be well-prepared to take on a colleague's visits.

Thanks to VITAE Care PDA, registrations will always reflect reality - how did the day go.

VISIT LISTS TRANSFERRED ELECTRONICALLY FROM VITAE CARE PLANNING

The visit lists are transferred electronically from VITAE Care Planning to VITAE Care PDA. Once the transfer is complete, the visit list will be available. The visit list is a copy of the planning that has taken place in the Planning module and contains relevant information about the client such as state of health, address, telephone numbers of the client, next of kin, and own doctor as well as information about the various visits and services, duration and travel time.

GET TO KNOW VITAE CARE PDA AT YOUR OWN PACE

An M-learning program is now available in connection with VITAE Care PDA. You can open the M-learning program directly from the main menu in VITAE Care PDA or as an independent M-learning program.

The program enables care workers to learn everything about VITAE Care PDA.

M-learning can either be used for helping care workers with a specific problem or used as a total education course for new staff as a supplement to, for example, peer training.

M-learning is organised into 15 modules that can be opened, closed, and repeated according to need.

Staff can run the M-learning program independently of VITAE Care PDA.

CONTACT CSC SCANDIHEALTH

Please call us at tel (45) 3614 4000 and e-mail scandihealth@csc.com for more information.

AVAILABLE INFORMATION FROM VITAE CARE RECORD

Notifications

- Notes
- Special overviews
- Medication
- Client plan
- List of services
- Focus areas

NO ADDITIONAL REGISTRATION

With VITAE Care PDA care workers can make all kinds of registrations during the client visit. The carer can:

- Register actual amount of contact time for visits and services.
- Register cancelled/changed services
- Add emergency visits and services
- Document directly in notes
- Document directly in new or existing focus areas
- Send internal notifications
- Send letters and messages to external business partners, for example, physician, pharmacy and hospital
- Document directly in the local authority's special overviews
- Create or edit new medication orders, register medication administration, dispensing and ordering
- List of medication is always up-to-date

ADDITIONAL SECURITY

VITAE Care PDA incorporates the extra security which is necessary when moving data outside the centralised data systems.

- Log on with user name and personal password
- Shuts down automatically if VITAE Care PDA has not been used for a specified period of time
- Automatically deletes all data after a period of time specified by the local authority if the PDA is lost or left behind

CSC Scandihealth A/S

CSC Scandihealth develops and supplies electronic health records and solutions for hospital information, clinical quality, care, health insurance, and student administration. We put our health professional knowledge and competence to work in support of the development of an integrated healthcare community.

We have supplied healthcare IT to Danish hospitals since 1972. We have created an unrivalled product range, a unique pool of know-how about the healthcare sector, and in-depth knowledge of the world of our customers.

Our employees are primarily working with the development and supply of healthcare IT. The knowledge and expertise of our employees encompass technology as well as healthcare, a combination that provides us with a sound basis for further development and delivery of healthcare IT solutions that allow our customers more time to concentrate on their own core services.

CSC Scandihealth is owned by CSC and is CSC's Nordic competence centre for healthcare solutions.
