

A CLIENT FOCUSED TOTAL SOLUTION FOR HOME CARE

Scandihealth

BENEFITS

Ensures
high-quality
documentation

Supports the
processes in home
care

Optimises
planning

Can be used at the
point-of-care

Transforms data
into knowledge

VITAE Suite puts the focus on the client.

Thanks to a number of different modules that all “communicate” with each other, data can be reused where relevant.

VITAE Suite focuses on cooperation across professional groups and sectors with the aim of enhancing overall client-related work.

At present the total VITAE Suite solution consists of the following subsystems:

- **VITAE Care Record**
- **VITAE Care Mobile Record**
- **VITAE Care Planning**
- **VITAE Care PDA**
- **VITAE Care Data Warehouse**

The VITAE Suite modules integrate with numerous external systems such as staff rostering systems, assistive technology systems, national health insurance, case management systems, pension systems, and many more, which minimises the need for manual data entry and update and thus reduces the risk of erroneous data.

The principle is that once registered, it must be possible to reuse data wherever relevant in VITAE Suite.

VITAE CARE RECORD AND VITAE CARE MOBILE RECORD

In VITAE Care Record common demographic information about the client is registered, along with assessment, professional documentation and communication as well as preventive home visits.

VITAE Care Record can also be used as a mobile solution – VITAE Care Mobile Record – either as a complete online solution with full access to all care records or as an offline solution with access to selected data.

In that way you will be able to look up and register changes in the care record, for example in connection with an assessment visit to the client. The offline solution is designed to ensure that data is secure – even when there is no mobile phone coverage.

COHERENCE WITH NURSING HOME AND PRIVATE PROVIDER

Access facilities allow local authority home care services, local authority nursing homes and private providers to coordinate their cooperation concerning the client – that is, one client, one record.

The solution makes it possible to set up the required communication and integration between the local authority and the private providers, respectively, and local authority nursing homes with due consideration of security requirements.

VITAE CARE PLANNING AND VITAE CARE PDA

VITAE Care Planning is the module that connects the assessed services with the staff to provide the services.

This module can be connected to the handheld module used on PDA's. VITAE Care PDA lets you upload the visit list of the individual care worker and enables registration of the services delivered while still at the client. This provides a basis for follow-up because assessed services, registered by the care manager, can be compared to the planned and delivered services in terms of time consumption as well as extra services, service exchanges and services not provided.

The solution can either be used as an online solution with possibility to load visit lists into and from the planning module and with direct access to a number of data from VITAE Care Record, for example

notes, medication, focus areas, or as an offline solution where the visit lists can be used, even when there is no mobile phone coverage.

VITAE CARE DATA WAREHOUSE

VITAE Care Data Warehouse for VITAE Suite presents facilities for extracting data from the solution.

In addition to offering easy and very flexible access to extracts of registered data, the data warehouse also includes a number of default statistics and extracts, including compulsory statistics that support day-to-day work as well as general follow-up activities.

CSC Scandihealth A/S

CSC Scandihealth develops and supplies electronic health records and solutions for hospital information, clinical quality, care, health insurance, and student administration. We put our health professional knowledge and competence to work in support of the development of an integrated healthcare community.

We have supplied healthcare IT to Danish hospitals since 1972. We have created an unrivalled product range, a unique pool of know-how about the healthcare sector, and in-depth knowledge of the world of our customers.

Our employees are primarily working with the development and supply of healthcare IT. The knowledge and expertise of our employees encompass technology as well as healthcare, a combination that provides us with a sound basis for further development and delivery of healthcare IT solutions that allow our customers more time to concentrate on their own core services.

CSC Scandihealth is owned by CSC and is CSC's Nordic competence centre for healthcare solutions.
